

REGAL

PRODUCT SPECIFICATION

REGAL Power Distributor PD-1

The Power Distributor is engineered to optimize the sonic performance of high-quality audio systems. A non-inductive input filter effectively reduces high-frequency noise without impeding current transients, providing amplifiers with optimal conditions to handle the dynamics of music. A dedicated filter serves as a noise barrier between the analog domain and the noisier digital domain. The star-ground concept is taken a step further to ensure no ground noise currents in the digital domain will affect analog audio components.

TECHNOLOGIES

Zero inductance filter for instant power to amplifiers

DESIGN CONCEPTS

Dual Domain Design
Phase Detection LED
Zero Inductance Input Filter
Noise Barrier
Star Ground

FEATURES

- Dual Domain Star Ground
- Line-Neutral Phase Indicator
- Digital to Analog Noise Barrier
- High Current PCB

PD-1-G Version:

Earth connector for use with ground control systems

SPECIFICATION

- Gold over silver plated OFC connectors
- Maximum Power: 3680 VA
- 6 x Power & Analog EU Schuko Outlets
- 2 x Digital Domain EU Schuko Outlets
- Size: 360 x 160 x 70 mm
- Weight: 3.5 kg
