WARRANTY

Regal offers a Limited Lifetime Warranty on cables and a 3-Year Limited Warranty on all electronics purchased directly from us or authorized dealers, covering defects in materials and workmanship under normal use. This warranty applies only to the original purchaser with proof of purchase and excludes damage from misuse, unauthorized modifications, improper installation, wear and tear, or environmental conditions outside normal use.

To file a claim, contact us at info@regalaudio.se with proof of purchase, a description of the issue, and any supporting photos. If approved, we will repair or replace the product; shipping costs may apply. Regal's liability is limited to repair or replacement of delivered Regal products.

ORDERING AND CONTACT

Cable Complications

Borrowed from watchmaking

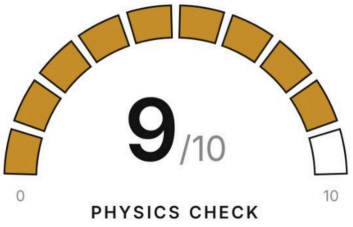

In fine watchmaking, every function beyond telling the time is called a complication. Each one is proof of what becomes possible when you refuse to accept the ordinary. All REGAL interconnects and speaker cables are built on our patented Zero technology.

> **In a REGAL cable, a complication is a technical solution that removes one cause of the music signal being affected.**

WHAT COUNTS AS A COMPLICATION

For a technical solution to count as a complication, it must meet three requirements.

1. **Same goal**
   As pure and unaffected a transport of the analog music signal as possible, beyond the cable's basic function.
2. **Physical coupling**
   There is a physical mechanism that affects the music signal.
3. **Independent review**
   Every claim can be assessed by anyone, with the help of AI. No marketing without basis.

Physical coupling, independently assessed with AI

A complication shows that a physical coupling to the music signal exists. It does not claim how large or audible the effect is.

THE MORE SOPHISTICATED THE CABLE, THE MORE COMPLICATIONS

NUMBER OF COMPLICATIONS	MOMENTUM	REFERENCE	SIGNATURE	SIGNATURE ONE
Analog interconnect	3	3	4	**6–7**
Speaker cable	7	7	7	–

Power cords affect the music signal only indirectly, so for them we describe technical solutions rather than complications.

Analog Interconnect

More complications, less between you and the music

Every REGAL interconnect is built on our patented Zero technology. Each step up the range adds complications, until Signature One brings them all together.

COMPLICATION	MOMENTUM	REFERENCE	SIGNATURE	SIGNATURE ONE
Low-loss dielectric end-to-end	PTFE	PTFE	PTFE	**PTFE**
High-purity conductor material	OCC	Silver	Alloy	**Alloy**
Return conductor, same material (RCA)	–	–	–	●
Helix shield geometry	–	–	–	●
Patented Zero technology	●	●	●	●
Centered, air-gapped signal conductor	–	–	●	●
Oil-impregnated conductor	–	–	–	●
Number of complications	**3**	**3**	**4**	**6–7**

THE COMPLICATIONS, AS IMPLEMENTED IN SIGNATURE ONE RCA

1 Low-loss dielectric end-to-end

The cable uses PTFE (Teflon) exclusively adjacent to the signal-carrying conductor — including within the connectors. This minimizes the influence on the music signal from electrical fields at the connectors and their terminations, where Zero technology cannot guarantee zero effect. The connectors are of the highest premium quality, from Duelund in Denmark.

2 High-purity conductor material end-to-end

The connectors use gold-plated OCC. The solid gold-silver-copper alloy in the signal conductor was carefully selected by listening, for the best balance and harmony in the audio presentation.

3 Return conductor in the same material as the signal conductor

The importance of the return conductor in single-ended cables is often underestimated. This cable uses the same material for the current return path as for the signal conductor, since the two share the same circuit. The differences perceived between materials used for signal conductors are largely due to differences in electron flow between materials. Since electron flow occurs within a closed circuit — of which the return conductor (normally a braided copper shield) is a part — the sound is affected by that material too.

4 Helix geometry for immunity to external magnetic fields

Braided copper shields are not effective at preventing magnetic fields from power supplies and power cables from inducing currents in signal cables. A helix-geometry shield cancels out the induced currents, both in the shield itself and in the signal conductor.

5 Patented Zero technology

The guard surrounding the signal conductor results in a zero electrical field around it. Zero electrical field means zero dielectric losses along the signal conductor. As a result, the electrical field that forms part of the signal remains unaffected — equivalent to the signal conductor sitting in a vacuum, with no physical material in its vicinity.

6 Centered, air-gapped signal conductor

A centered guard within a volume consisting mainly of air gives both a consistent capacitance along the cable, and the air minimizes the distributed capacitance. For this cable, that results in a capacitance of approximately 26 pF/m.

7 Oil-impregnated conductor

Mineral oil-impregnated signal conductor — the impregnation uses the same technical principle applied, for example, in Duelund capacitors, but here applied to the conductor itself.

Speaker Cable

Seven complications in every series

The same seven complications in every series, taken further at each level. Alternating plus and minus conductors give low inductance, low emission and immunity to magnetic fields. Since the cable spreads almost no field around it, it is also less affected by the floor or rug it lies on, otherwise a source of loss.

Power Cord

Affects the music signal indirectly, via the power supply

We do not use the term complications here. Power cords affect the music signal indirectly, and how much depends on the rest of the system. The same circular geometry as in our speaker cables, with alternating phase and neutral conductors.

Principle sketch

Digital to Analog Conversion

DAC101

DAC101 Features R2R non-oversampling technology renowned for its musical qualities, thanks to its simplicity without digital filters or feedback loops. To address sensitivity to clock jitter, advanced reclocking techniques are employed. Supercap power supply and patented Zero technology embedded in the circuit board contribute to authentic timbre and a very transparent sound reproduction. A perfect match with our Reference and Signature interconnect cables.

Conversion	PCM audio, up to 24 bits / 192 kHz
Noise floor	130 dBr
THD	0.003 % @ 2 kHz, -6 dBFS
Frequency response	0-50 kHz +0/-1 dB
Jitter	<1ps (typ)

HiFi & Musik Review 2024

"A sense of being directly connected to the music."

"The more you listen, the more fascinated you become by all the spatial information the converter manages to carve out."

"The feeling of fresh, unadulterated, and organically flowing sound is Regal's true strength, quickly captivating you with the music."

Stereo+ Review 2024

“Regal DAC101 is not about more details and greater precision, but about a better and deeper listening experience."

“With the DAC101, we’re talking about a natural and friendly presence, where the sound is presented in a way that clearly delights the ear. Despite its high-tech inner workings, it delivers an experience that feels simple, effortless, and more natural than comparable digital converters.”

“The DAC is exceptionally transparent, quiet, and remarkably open. It plays with a relaxed yet focused three-dimensionality that gives instruments ample space and precise placement within the soundstage.

Integrated Amplifier

INT250

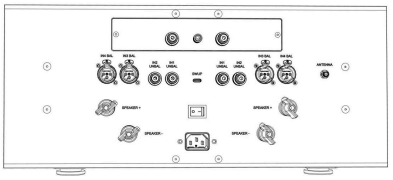

(New 2025-12)

REGAL INT250. A reference class zero global feedback class AB integrated amplifier designed for the most discerning music lovers. The INT250 delivers natural presence, tonal purity, and a musical presentation that reveals both the finest nuances and the full power of dynamics. With an uncompromising design philosophy, patented ZeroTechnology, and meticulously refined engineering, REGAL offers a distinctive path to true high-end performance. A perfect match with our DAC101 and Signature interconnect cables. The INT250 DS includes an integrated DS Audio Equalizer for optical cartridges using Zero Technology and Silver Mica capacitors.

Made in Sweden.

Output Power [8/4 ohm]	250/500 Watts
Bandwidth [+0 / 3 dB]	4 Hz - 440 kHz
THD [1 kHz, 10W]	0.05 % (typ)
Output Impedance	0.1 ohm
Amplification Gain	31dB

CORE TECHNOLOGIES

Zero global negative feedback
Patented zero loss signal paths
Temperature controlled bias

DESIGN CONCEPTS

Class AB dual mono topology
Ultra low phase distortion
Heat pipe thermal management
High performance Sziklai drivers
32 Toshiba power transistors
2000 W power supply w. soft start
250 000 uF capacitor bank

FEATURES

64-step relay-controlled resistor ladder volume control
2 × RCA and 2 × balanced XLR inputs
Copper-foil capacitors for ultimate sonic realism
TFT display with touch control and adjustable dimming
WBT speaker binding posts
IsoAcoustics isolation feet
User-selectable operating temperature range

The Revelation

Open baffle loudspeaker with horn

(New 2026-10)

The Revelation is built in only a few pairs per year. An open baffle speaker with horn, made in Sweden, for those who seek something beyond the ordinary in sound, materials and expression.

The baffle is Swedish diabase from a quarry in Skåne, sawn, hand-hewn and polished. You can choose to be involved throughout the process, from selecting the stone at the quarry to colour matching and installation. We gladly adapt to your wishes.

Installation and calibration in your listening room are included, as is advice on placement, acoustics and your audio system as a whole.

Recommended amplification: from 50 W per channel.

DESIGN

Principle	Open baffle with horn
Bass	15-inch driver designed for open baffle, neodymium magnet
Midrange and treble	3-inch compression driver, nitride-coated titanium diaphragm, neodymium magnet
Horn	Biradial, 3D-printed in carbon fibre reinforced material for maximum stiffness. Decoupled stand
Crossover	Passive, 700 Hz. Mundorf and Duelund components, direct point-to-point wiring, under a transparent cover. Can be adapted for bi-amping
Baffle	Swedish black diabase stone, 50 × 80 cm, polished front, hand-hewn edges
Side wings	Clear acrylic
Stands	Easel-style stand with solid oak braces, floating baffle suspension
Adjustment	Continuously adjustable tilt of both horn and baffle, for calibration during installation
Low-frequency extension	32–36 Hz (−6 dB), depending on room and placement
Sensitivity	90 dB (1 W / 1 m)
Weight	50 kg per speaker, excluding packaging
